### Mighty Mouse Final Writeup

Although it is smooth and shiny, my mouse does not function very well at all. The paint changed how the lip of the bottom fits with the top which makes it very difficult for the flaps to click. I accidentally took off some paint in the process of trying to get it to click. However, the scroll wheel works well, and I'm very happy with how the tear drop design looks and works. The ergonomic design fits my hand very well, and the contoured sides compliment my thumb and fingers well. The slick feeling is also nice. It no longer feels like cheap, bulky plastic. I would definitely use this mouse if the functions were more reliable.
